

SIZE SELECTION GUIDE

Size Selection guide

Ensure that you have the right size halfmask for your face. You must confirm the fit with a fit test performed according to OSHA regulations 1910.134. However, the information below will help your halfmask fitting specialist to select the halfmask most likely a starting point. Using the definitions of face width and length, the face size of a user can be determined from the NIOSH panel below.

Size Selection

Regardless of facial dimensions and respirator sizing charts, users must do an actual qualitative or quantitative respirator fit test to make sure that the correct respirator size is selected. Do seal test, see page 15. If the respirator does not pass the seal test or feels uncomfortable, try the next nearest size relative to your face. Passing the seal test does not verify that the size is correct. Do a qualitative or quantitative respirator fit test to verify the size. If the respirator passes the seal test but does NOT pass a respirator fit test, try the next nearest size.
